PROFESSIONAL SUMMARY

Senior Java Software Engineer with 6+ years of experience building secure, scalable enterprise and financial applications across backend and full-stack environments. Strong expertise in Java, Spring Boot, microservices, Kafka, Angular, AWS, databases, security, and cloud-native delivery, with hands-on experience integrating AI/ML-backed capabilities into software workflows. Recent engineering work combines Java 21/Spring Boot 4/Angular 21 document engineering with NLP/Transformer experience using BERT, PyTorch, and model-inference pipelines. Proven impact includes 25% faster APIs, 35% faster deployment turnaround, and test coverage up to 80%.

TECHNICAL SKILLS

Languages: Java 21, SQL, TypeScript, JavaScript, Python
Java / Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Cloud, Hibernate, JDBC, Resilience4J, Flyway, PDFBox, Spring AI
Architecture / APIs: Microservices, REST APIs, Apache Kafka, Event-Driven Architecture, AOP, Design Patterns, OpenAPI/Swagger, JSON, XML, SOAP
AI / ML Engineering: BERT, Hugging Face Transformers, PyTorch, NLP, model fine-tuning, inference/API integration, probability calibration, scikit-learn, Spring AI
Security: JWT, OAuth 2.0, OpenID Connect, SAML, LDAP
Frontend: Angular 21, TypeScript, RxJS, Angular Material, React, Vue.js, HTML5, CSS3, Bootstrap
Cloud / DevOps: AWS, Google Cloud, Backblaze B2 (S3-compatible), Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, Maven, Gradle, Git, CI/CD
Databases: PostgreSQL, MySQL, Oracle, MongoDB, DynamoDB, Cassandra, PL/SQL
Testing / Observability: JUnit, Mockito, Testcontainers, Postman, SonarQube, ELK, Splunk, Linux/Unix

SELECTED PROJECT

AI Legal Document Reader & Summarizer | AI-Enabled Full-Stack Engineering Project | GitHub

- Architected a secure full-stack document platform using Java 21, Spring Boot 4.1, Angular 21, PostgreSQL, and Flyway, with JWT access/refresh authentication and REST APIs for upload, history, metadata, status, retrieval, extraction, and deletion.
- Built a resilient PDF ingestion and text-extraction pipeline with PDFBox, SHA-256 integrity tracking, user-scoped storage, controlled document-state transitions, and explicit handling for corrupt, encrypted, empty, scanned/image-only, and non-extractable PDFs.
- Integrated Backblaze B2 object storage through the AWS SDK's S3-compatible API and persisted user, refresh-token, and document metadata with Spring Data JPA/PostgreSQL; added OpenAPI/Swagger tooling and automated backend test dependencies.
- Implemented Angular standalone workflows for validated uploads, progress tracking, dashboard/history/detail views, pagination, secure document access, and automatic token refresh/retry through an HTTP interceptor.

PROFESSIONAL EXPERIENCE

Senior Java Developer | Dmitra Technology | Remote **Aug 2023 – Aug 2024**

- Developed and maintained 8+ Java/Spring Boot microservices and 20+ REST API endpoints for secure distributed enterprise workflows.
- Improved API response times by approximately 25% by optimizing Spring Boot service logic, Hibernate/JPA queries, and SQL data-access patterns.
- Built Kafka-based asynchronous integrations processing approximately 50K+ events per day, reducing synchronous dependencies between services.
- Integrated AI/ML-backed NLP and model-inference services into Java/Spring Boot microservices using REST APIs and Kafka, handling inference orchestration, validation, failures, and structured model outputs.
- Built an LLM-backed document-analysis pipeline using Spring AI, implementing token-aware document chunking, hierarchical summarization, structured legal-information extraction, model-response validation, and failure handling for production-style AI workflows.
- Implemented document-grounded question answering using embeddings, semantic retrieval, and RAG, retrieving relevant document passages before LLM inference and returning grounded responses with source context.
- Strengthened service security with Spring Security, OpenID Connect, SAML, authorization controls, and request validation across protected flows.

Full-Stack Java Developer | InfoDevelopers Pvt. Ltd. | Kathmandu, Nepal **Jul 2021 – Jul 2023**

- Designed and delivered 10+ Spring Boot microservices and 30+ REST APIs using Spring Data JPA, Spring Security, Spring Cloud Config, and Resilience4J.
- Built Kafka producers/consumers processing approximately 100K+ messages per day to support reliable asynchronous distributed workflows.
- Implemented authentication and authorization with Spring Security, OAuth, LDAP, filters, and AOP to centralize security and cross-cutting controls.
- Developed 15+ Angular/TypeScript components and reusable UI modules integrated with Spring Boot services for end-to-end full-stack features.
- Built full-stack integration flows for AI-assisted features, connecting model/inference APIs to Spring Boot services and Angular interfaces while transforming prediction outputs into structured business responses.
- Reduced deployment and release turnaround time by approximately 35% through Docker, Kubernetes, AWS, Terraform, and Jenkins-based CI/CD automation.

Full-Stack Java Developer | Enfiny Innovation | Kathmandu, Nepal **Mar 2019 – Jul 2021**

- Developed 15+ Spring Boot REST APIs and microservices supporting banking, loan, mortgage, payment, and financial-transaction workflows handling approximately 50K+ transactions per day.
- Delivered backend features with Spring MVC, Spring Data JPA, Hibernate, Spring Security, and event-driven architecture across enterprise financial workflows.
- Applied core Java concepts including collections, generics, exception handling, multithreading, JDBC, lambda expressions, and design patterns in production backend development.
- Developed 20+ Angular/TypeScript components and application screens integrated with internal and external APIs for end-to-end financial workflows.
- Reduced complex database query execution time by approximately 30% by optimizing PL/SQL procedures, indexes, joins, views, triggers, and Oracle/MySQL queries.
- Increased automated test coverage to approximately 75% with JUnit and Mockito, helping reduce regression defects by approximately 20%.
- Supported Jenkins build automation, Docker/AWS deployments, Git workflows, debugging, releases, and production issue resolution in Agile delivery teams.

Java Developer | Yarsha Tech | Kathmandu, Nepal **Dec 2017 – Mar 2019**

- Developed and maintained 10+ Java/Spring Boot REST endpoints supporting enterprise backend functionality and service integrations.
- Built Hibernate ORM/DAO persistence components and supported Kafka-based processing of approximately 20K+ events per day across distributed application components.
- Created unit and validation tests, participated in code reviews, and supported Maven builds and CI pipeline activities to improve release readiness.
- Applied core Java including JDBC, collections, generics, lambda expressions, exception handling, multithreading, and design patterns in reusable backend logic.
- Reduced recurring application issues by approximately 20% through debugging, ELK/Splunk log analysis, production troubleshooting, and CI/release support.

EDUCATION

Master of Science in Computer Science | The University of Texas at Arlington | Arlington, TX **Aug 2024 – May 2026**
GPA: 3.8

B.Sc. in Computer Science & Information Technology | St. Xavier's College, Tribhuvan University **2016 – 2020**

ADDITIONAL EXPERIENCE

Graduate Teaching Assistant | The University of Texas at Arlington | Arlington, TX **Aug 2024 – May 2026**

- Supported Information Security, Java, and Operating Systems courses through grading, technical explanations, troubleshooting guidance, and student support.
- Helped students understand core technical concepts through clear explanations, debugging support, and practical troubleshooting guidance.
